

### Introduction

### ING InsideBusiness Portal

ING InsideBusiness Portal is a digital international banking platform that offers your business a single point of access to your Commercial Banking services and products, wherever you are. It provides easy online and mobile access to a growing range of corporate banking services.

This manual provides information about the possibilities of InsideBusiness Payments, one of the products in InsideBusiness Portal.

# **Getting to work**

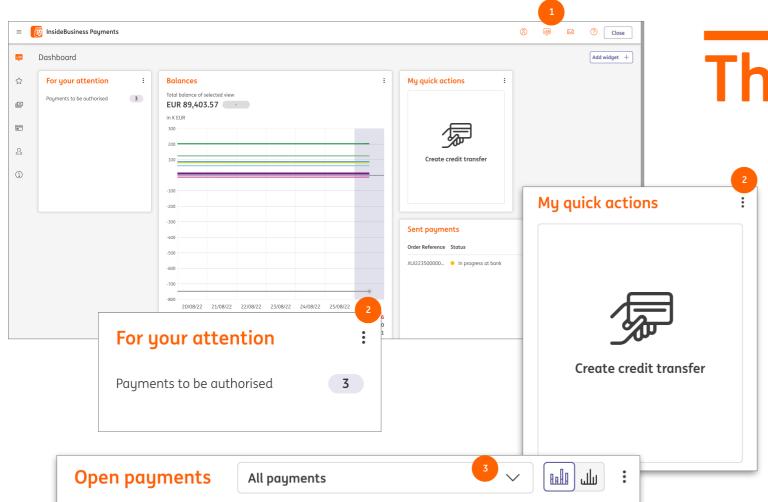

## InsideBusiness Payments is part of InsideBusiness Portal.

To start using InsideBusiness Payments first login to InsideBusiness Portal. For this you can use your iDentity-card or mToken. Follow the on-screen instructions.

After logging in you will see the InsideBusiness Portal Dashboard. Navigate to the menu option **Payments** and click on **InsideBusiness Payments**. Now you will see the InsideBusiness Payments Dashboard.

Click if visible on a page to view a short movie about the subject.

### The Dashboard

The InsideBusiness Payments
Dashboard contains widgets that can
help you in your daily work.

The **For your** attention and **Summary** widgets are always available. The availability of other widgets depends on your permissions. You can add new widgets by clicking on the dashboard icon. Widgets can be configured, deleted or hidden by clicking the edit icon or using the configuration options that appear when moving your mouse to the top of the widget.

### The Menu

The InsideBusiness Payments menu

appears when you move your mouse to the left side of the screen.

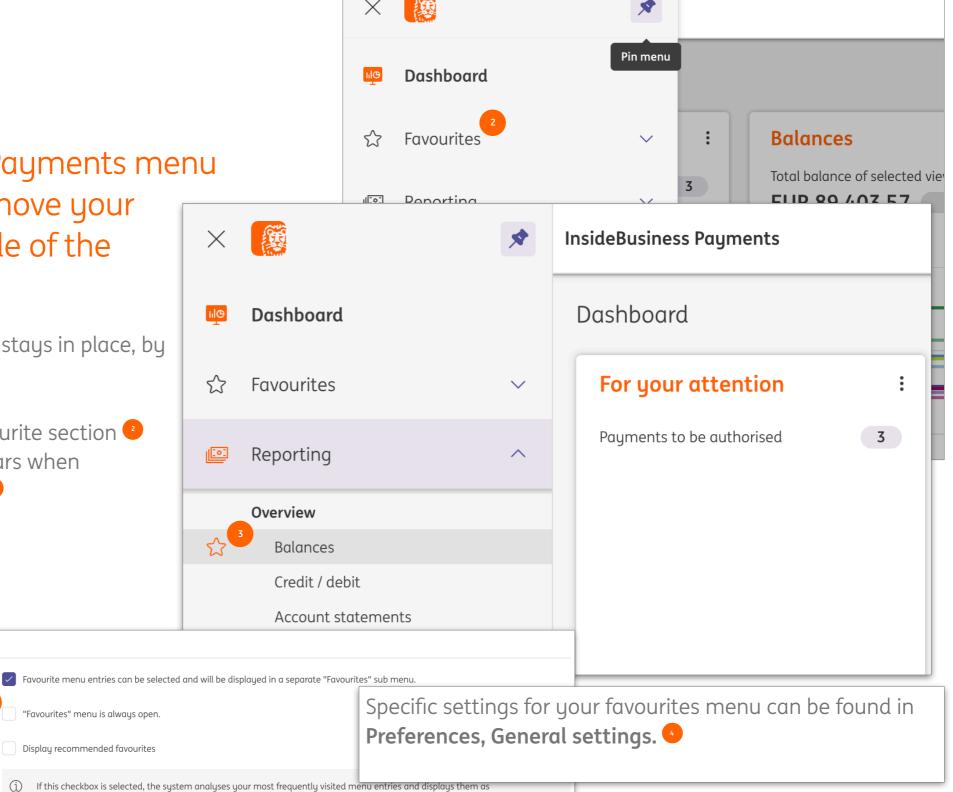

The menu can be pinned so it stays in place, by clicking the pin icon. 1

You can add items to the favourite section by clicking the star that appears when hovering over a menu item. <sup>3</sup>

"Favourites" menu is always open

Display recommended favourites

recommended entries in the "Favourites" main menu. Please note that the analyses may take some time.

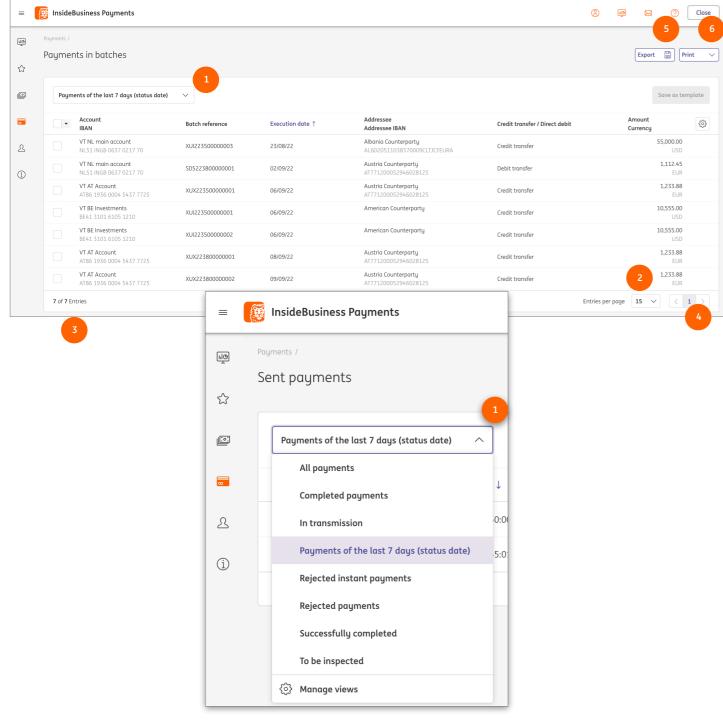

Settings for "Favourites" menu

Favourite menu entries displayed

"Favourites" menu opened

Recommended favourites

If not all columns are visible on screen, scroll down to the bottom of the table to find the horizontal scroller.

### Table view screens

InsideBusiness Payments contains detail screens and table view screens. There are some general principles to keep in mind when using these screens.

A table view screen contains data presented in a table. There might be different views available to select from. The table contains columns and rows. The number of rows visible per page can be changed. The total number of rows is shown below the table. If not all data fits on one screen it will be presented in multiple screens. You can select the screen you want to see with the selections buttons on the right side below the table.

The **Export** button lets you export the data seen on screen in a CSV format. With the **Print** button you can create a pdf with this data.

# Managing columns

Every table view has the option to add, remove or reorder the columns the way that suits you most.

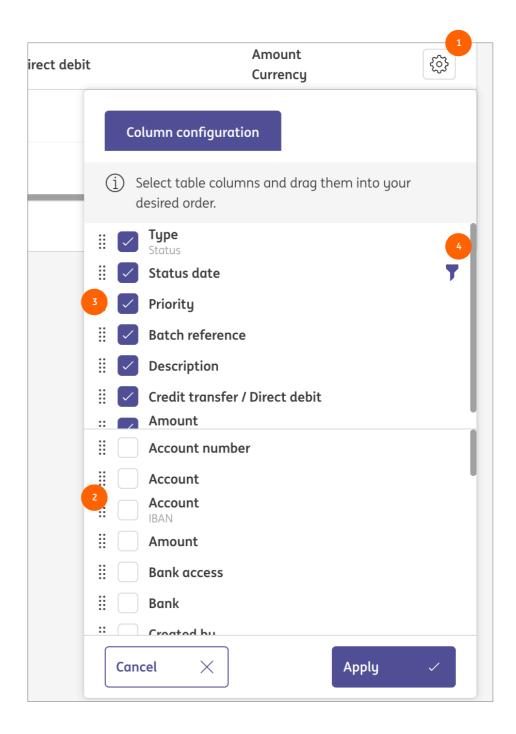

For this click the gearwheel that's visible to the right of the last shown column.

Columns can be added by checking the check box <sup>2</sup>, or directly dragging them to the desired position.

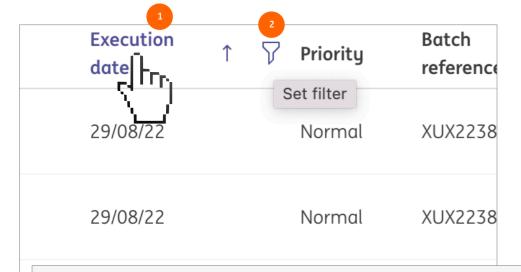

Columns can be removed by unchecking the check box in front of the column name.

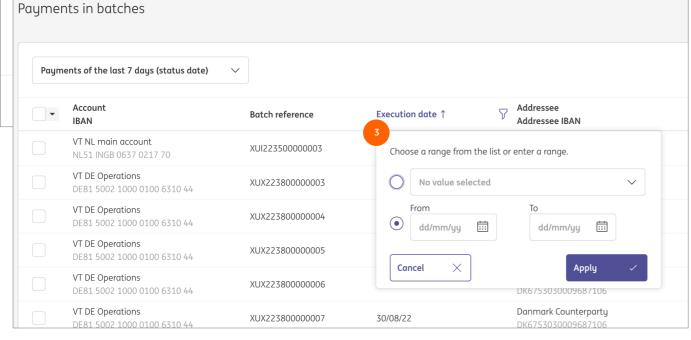

Re-order the columns by dragging them to the position you want the column to be.

After clicking **Apply** the newly configured screen will be presented.

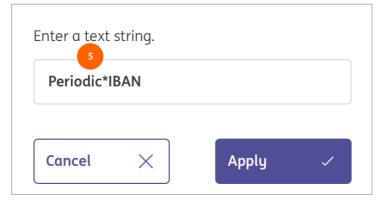

# Sorting & filtering

The data in a table view can be sorted on every column by clicking <sup>1</sup> the column name. Clicking again revers the sorting order. An arrow shows the sorting direction.

If you hover over a column name the filter symbol is revealed. Clicking this symbol will open filter window. The content of this window depends on the type of data that is shown in the column. Set a filter and click **Apply**.

If you remove a column from the table view after having set a filter on it, the filter will stay in place. In that case a filter symbol is shown next to the column name in the column overview. See • on previous page.

In case of a text filter you can use the \* symbol as a placeholder. In this example • all items that contain the word "Periodic" followed by text that contains "IBAN" are part of the filter result.

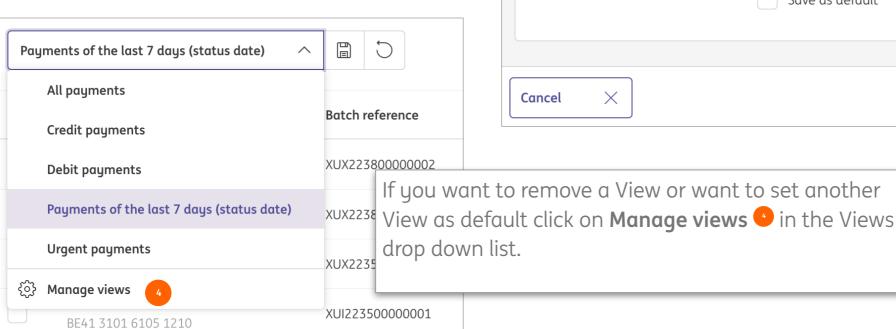

# Managing views

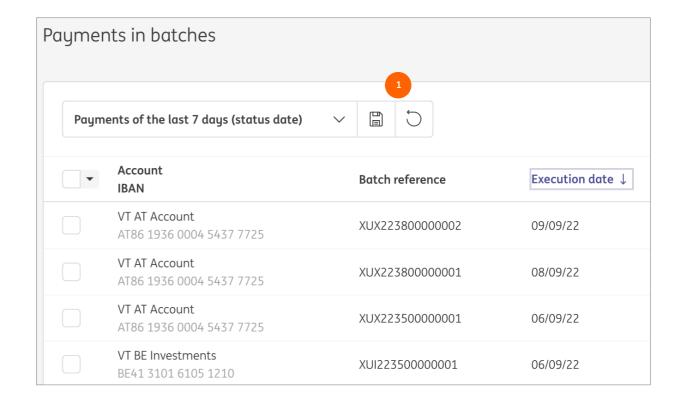

After you changed a table view by managing columns, sorting and filtering two new symbols appear. • Clicking the arrow reverts all changes you did. Clicking the diskette bring you to the **Create view** window.

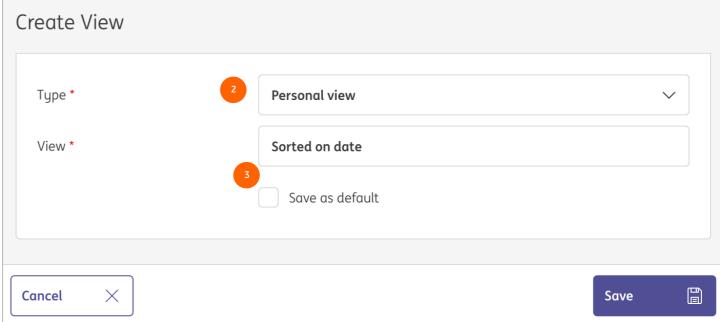

By creating your own view the changes you applied to the table view will not get lost after leaving the page.

The Type of the view determines who will be able to see and select the view. A **Personal view** is only visible for you. A **Customer view** is visible for all your colleagues as well.

Check **Save as default** to always have the table view opened with this view.

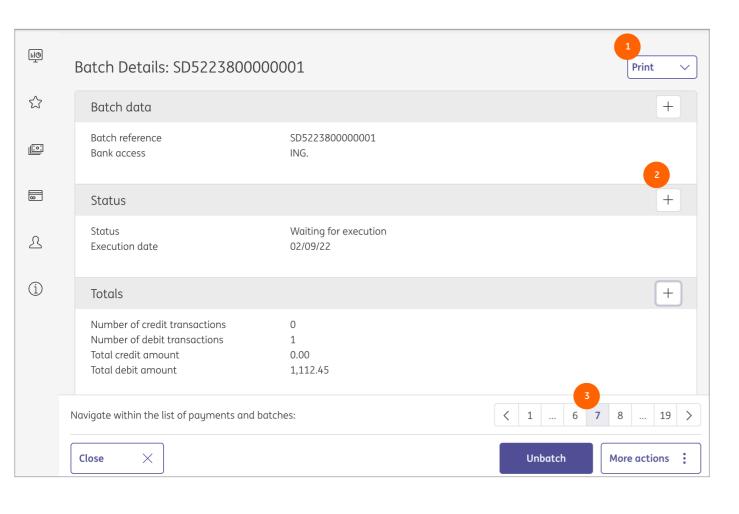

### Detail screens

InsideBusiness Payments contains detail screens and table view screens. There are some general principles to keep in mind when using these screens.

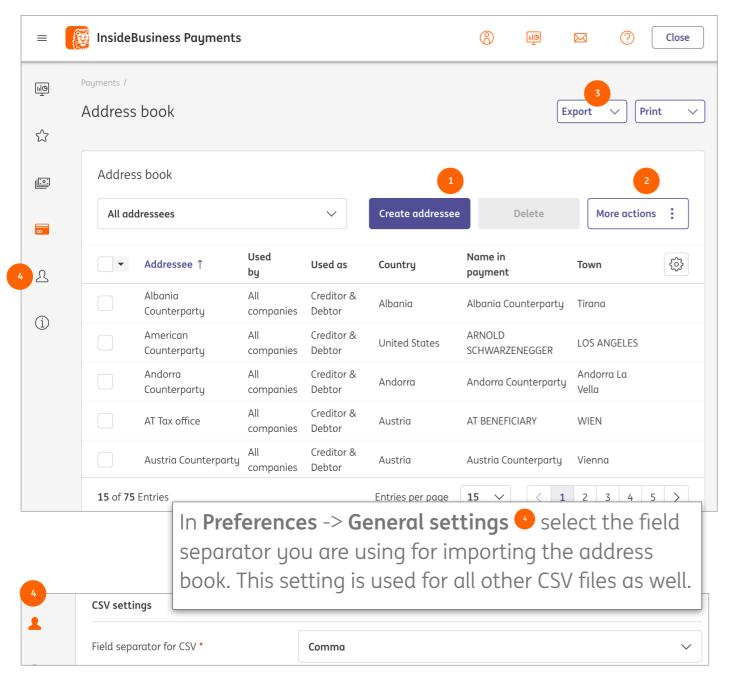

A detail screen shows the data of one item selected from table view. There are some general elements that you will find on almost every detail screen.

The **Print** button • lets you create a pdf with the data presented on screen.

Some info is by default not visible but can be unhidden by clicking the + sign.

The navigate buttons <sup>3</sup> at the bottom of the screen are used to navigate through the items in the underlying table view.

### The Address book

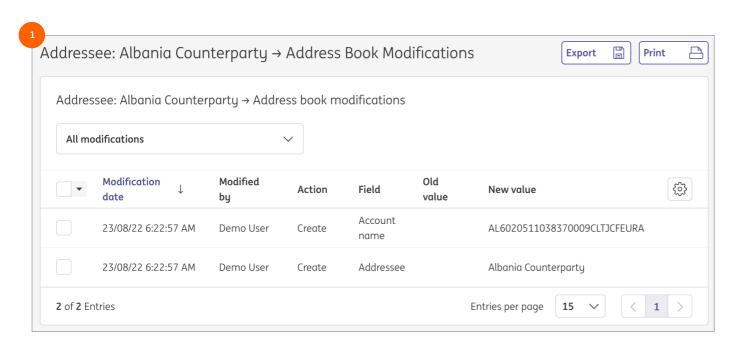

You can use your address book to store information about your debtors and creditors. In InsideBusiness payments they are referred to as addressees.

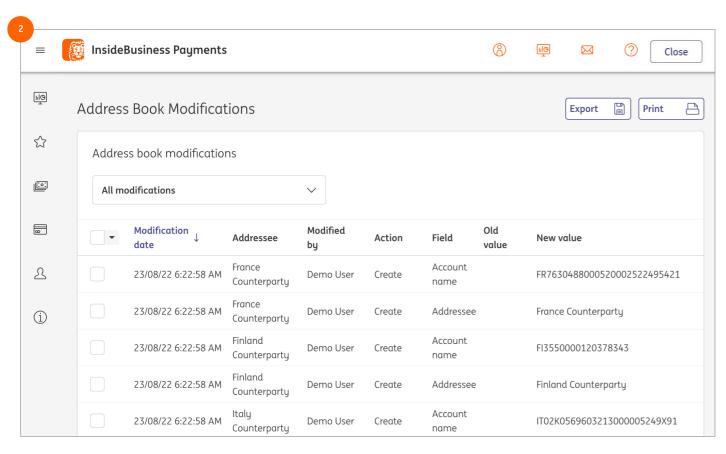

The address book is visible for all users with the permission to create payments. Users having the profile **Maintain counterparties** assigned are allowed to maintain the address book.

You can create a new addressee by clicking the **Create** addressee button.

Addressees can also be imported as a comma separated file by clicking **More actions** -> **Import.** To get an example of the import file, first manually create an addressee, select it and click **Export** -> **Download** addressees. See the appendix for an example import file.

### View modifications

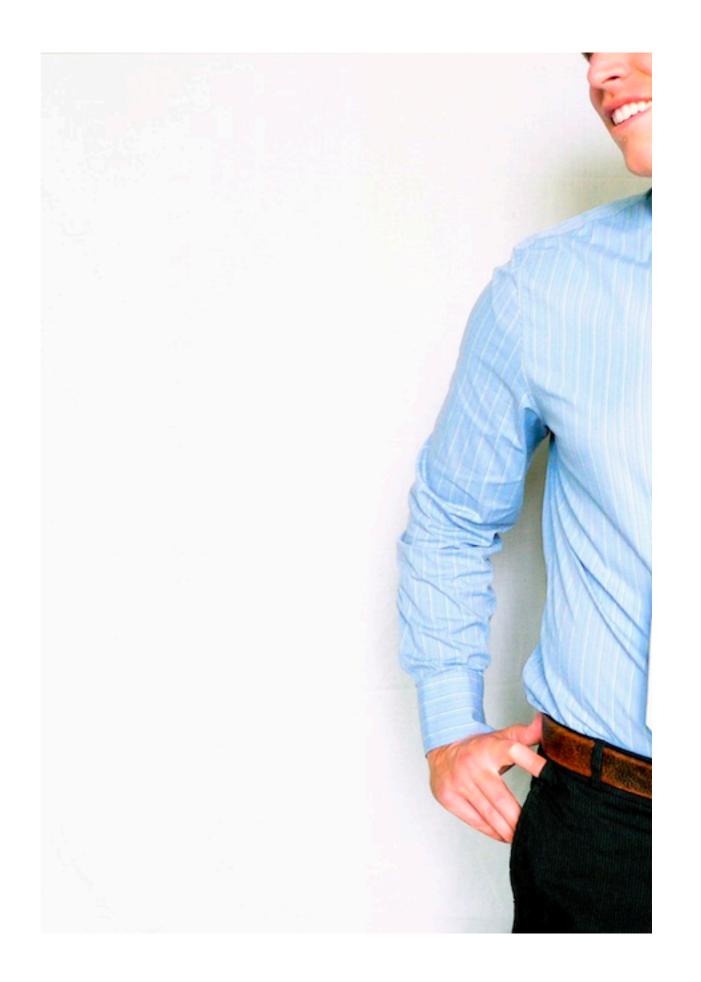

If there is a need to see what was changed in the address book and by whom, it is possible to view the address book modifications.

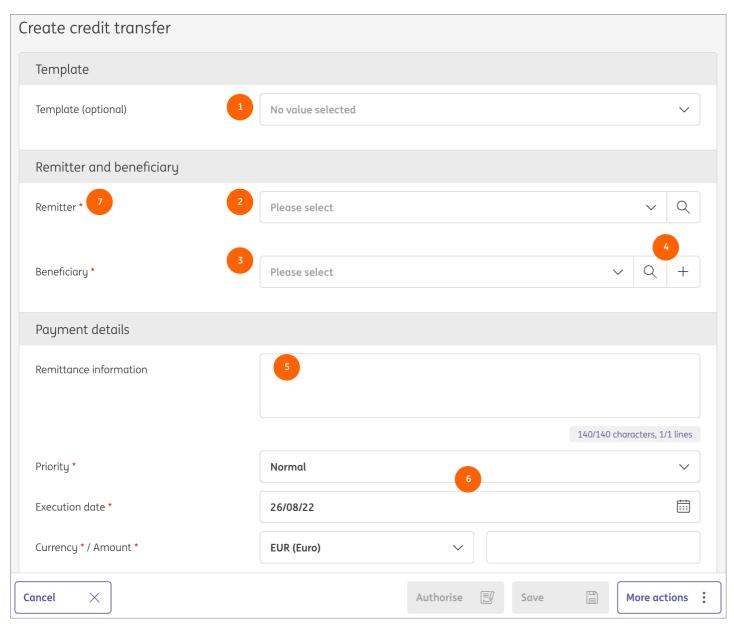

You can view the modifications of a single addressee by clicking **More actions** -> **View modifications** on the address detail screen.

In case the name of an addressee has changed or an addressee has been deleted the modifications can better be found on the general overview of modifications that can be reached by clicking More actions -> View modifications on the address book screen.

# **Payments**

With InsideBusiness payments you can create and import payments and direct debits in multiple domestic and international formats.

The payment will be booked from your account on the execution date. The book date of the credit booking depends on product, country, currency and beneficiary bank. Book date and value date may differ. Please see Payment cut-off times.

# Manual payments

To manually create a payment go to **Payments** -> **Create** and select the type of payment you want to create.

In this manual we will use Credit transfer as an example. Instructions for specific payment types can be found <u>here</u>.

Once you have created a payment it can be saved as template for future use. If you did so, you can select the template here. 1

Select the remitter account. Only accounts that can be used for this type of payment and for whom you have permission to use are shown.

Select the beneficiary account. Only the 50 most frequently used are shown. To select others click on the magnifying glass. If you have the profile **Maintain** counterparties assigned you also have the option to enter beneficiary details manually by clicking the + sign.

Enter remittance information <sup>5</sup> that will be shown on the account statement, select the priority, execution date and currency and enter the amount.

Based on the entered data InsideBusiness Payment will determine the preferred payment product and show the product specific fields.

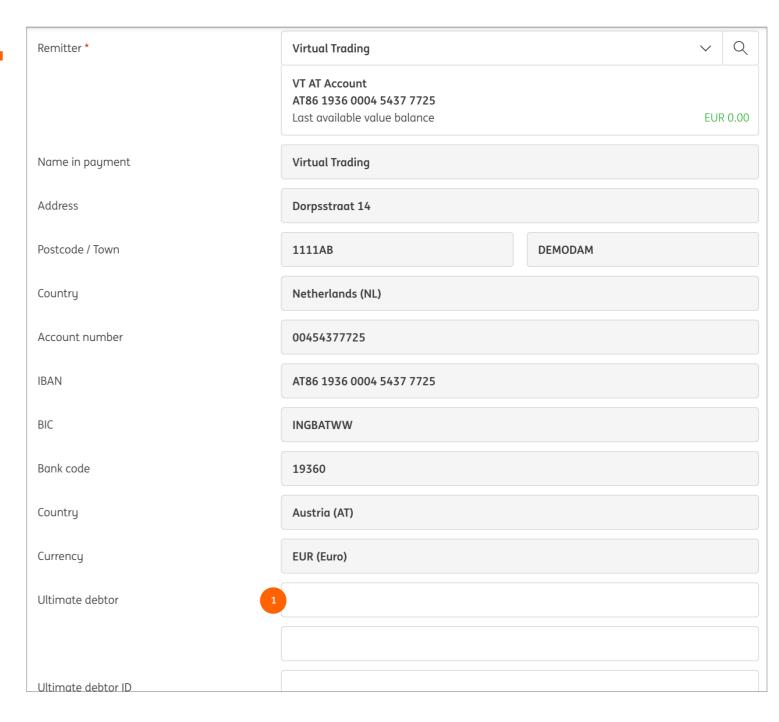

Mandatory fields have a \* next to the field name.

### Remitter

The remitter details are taken from the InsideBusiness administration.

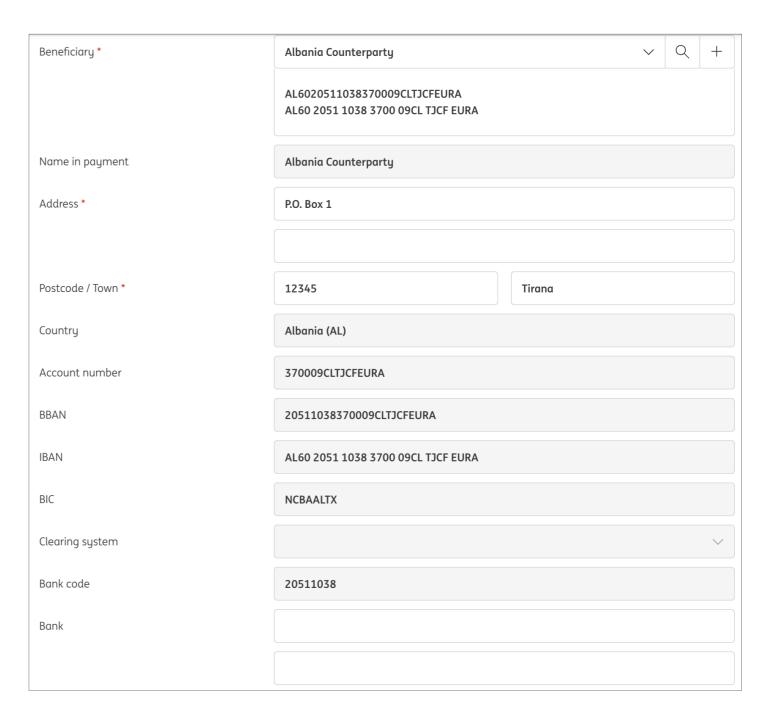

The ultimate debtor fields • can be used to indicate the real source of the payment. This can for instance be used by a service bureau that pays bills on behalf of a third party. The ultimate debtor will be shown on the account statement instead of the real debtor.

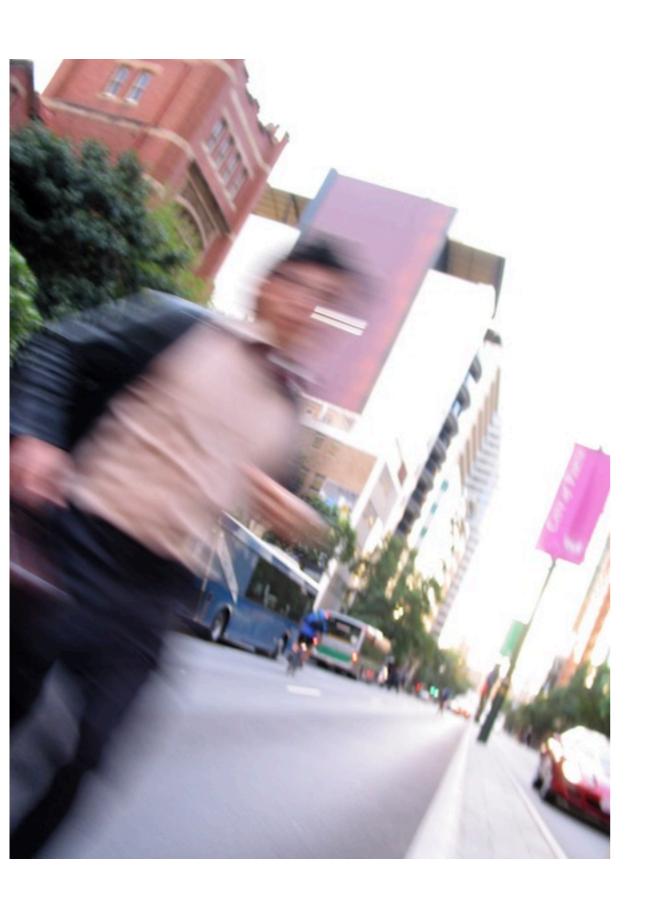

# Beneficiary

The beneficiary details are either manually entered or taken from the address book.

For some payment types like international payments, the beneficiary address and town is mandatory.

# Priority

In the **Payment details** section you can set the **Priority** of the payment. The available options depend on the remitter country and the payment product.

Normal	Payment without instructions	Available for most payment types.
Instant	Payment fully processed and cleared within seconds	Available for SEPA and Hungarian domestic payments to supporting banks. Instant payments have an amount limit.
Treasury Payment	Payment is cleared over Real time clearing engine like Target2, Sorbnet etc.	Available for SEPA and some domestic payments.
Urgent	Depending on payment product, payment is settled same Day or uses Real time clearing engine.	Often available for international, domestic and SEPA payments.

# Further payment details

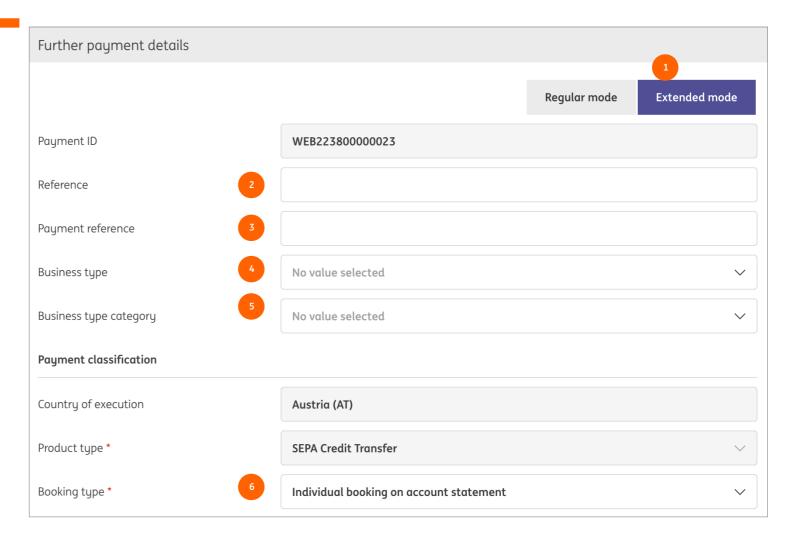

The content of the **Further payment details** section depends heavily on the determined product. Default only a few fields are shown. By clicking the **Extended mode** button all fields become visible.

The **Reference** <sup>2</sup> field is used to store the so called EndToEnd-ID. This field is sent with the payment and reported on the account statement.

The **Payment reference** I field is used for structured remittance info. The coding of the entered value has to comply to ISO 11649, Dutch betalingskenmerk or Belgium BBA.

Select **Business type** • CBBF if the purpose of the payment is Capital building.

The field **Business type category** can be used to indicate that the payment has to be processed as an intracompany payment (code word INTC) or as a Salary payment (code word SALA). A batch with multiple Salary payments will be processed such that all payments are credited at the same date.

The field **Booking type** • indicates how this payment is reported on your account statement.

**Individual booking on account statement** means that every payment is reported individually, even if the payment is part of a batch with payments.

**Total amount on account statement** means that a batch with payments will be reported in one line with a total amount on the account statement.

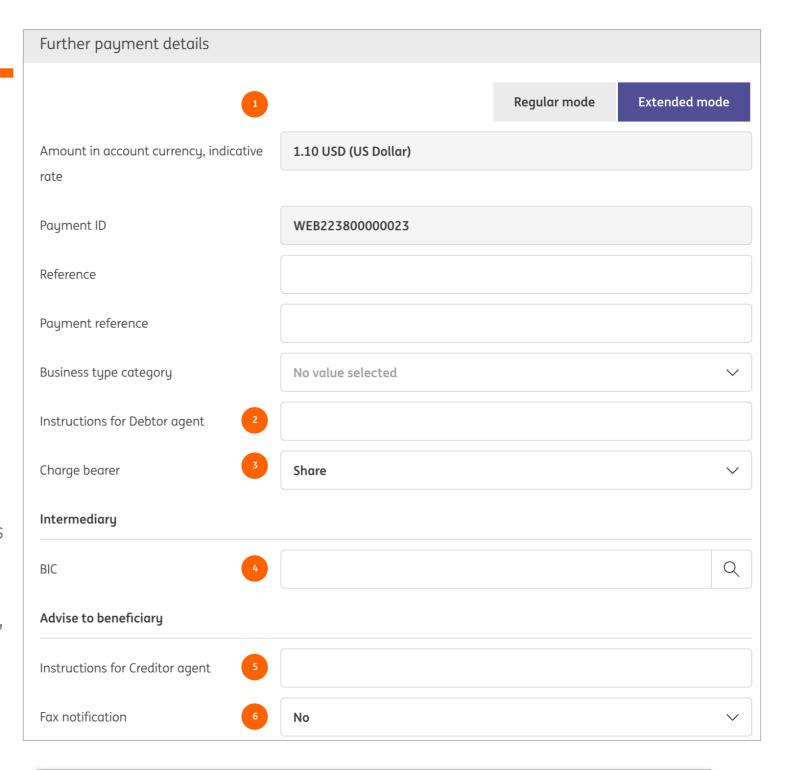

# More further payment details

In case of international payments more further payment options will become available.

In case the transaction currency differs from the account currency the amount in account currency will be shown.

If instructions for debtor or creditor bank have to be provided they can be entered in <sup>1</sup> or <sup>5</sup>.

The **Charge bearer** <sup>3</sup> value indicates how the payments costs have to be split up. Only the allowed values are shown. Options are: **Share**, **Beneficiary**, **Originator**. If the payment has to be routed via an Intermediary bank, the BIC of that bank can be added here.

If a Fax notification has to be sent when the payment is completed this can be indicated here. • For Dutch ING accounts, ING will send the fax. For other accounts the fax number will be sent in the MT103.

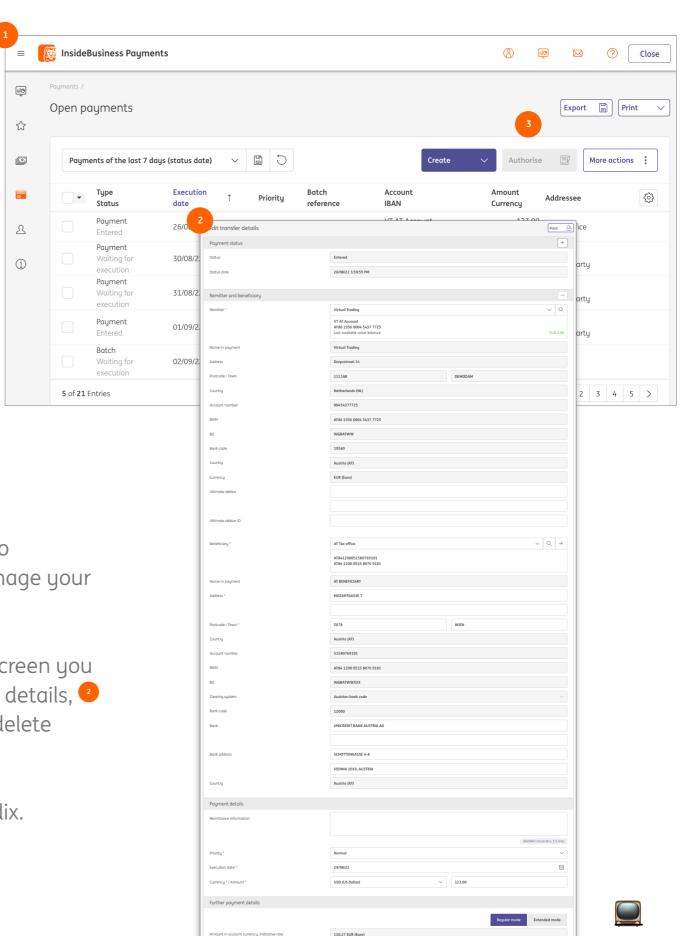

### Open payments

After a payment/batch is created or imported it will be visible on the Open payments screen.

The Open payments screen • can be reached by navigating to **Payments** -> **Open payments**. This is the place where you manage your payments and batches until they are sent for processing.

As long as a payment/batch is visible on the Open payments screen you are in fully control of it. You can view and change the payment details, <sup>2</sup> authorise <sup>3</sup> the payment/batch, put payments in batches or delete payments (see next page for an overview of all actions).

For an explanation of payment statuses please see the appendix.

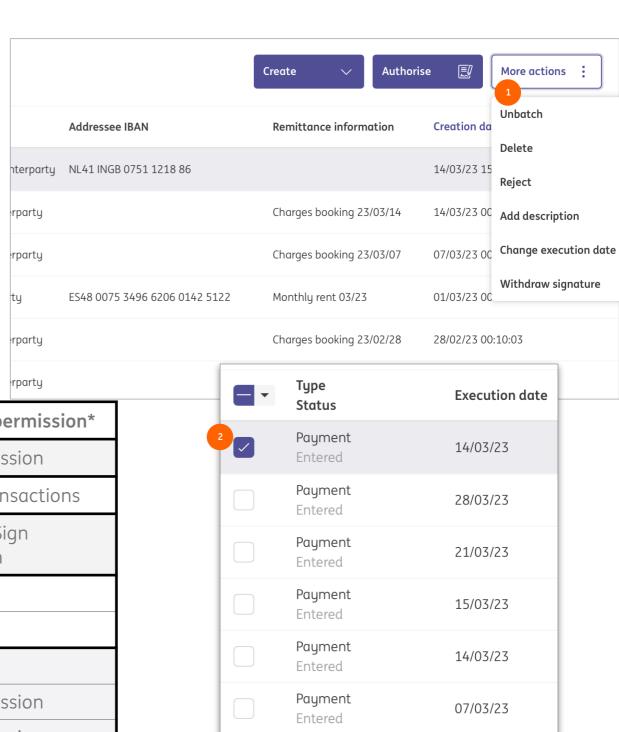

### More actions

The More actions button <sup>1</sup> contains actions you can perform on either selected Payments <sup>2</sup>, Batches <sup>3</sup> or both.

Whether an action is allowed depends on the type and the status of the selected item. For some actions a specific permission is needed. These can be found in below table. The permission to view the transactions is always needed.

Action	For type	For statusses	Required permission*
Unbatch	Batch	All statusses	Sign permission
Delete	Payment	Entered	Initiate transactions
Reject	Batch	All statusses	Initiate & Sign permission
Add description	Batch	Ready for authorisation	-
	Batch	Partially authorised	-
Change execution date	Payment	Entered	-
	Batch	Ready for authorisation	Sign permission
	Batch	Partially authorised	Sign permission
Withdraw signature	Payment	Partially authorised	Sign permission
*C A   ' '	Batch	Partially authorised	Sign permission

<sup>\*</sup> See <u>Administraton</u>

Batch

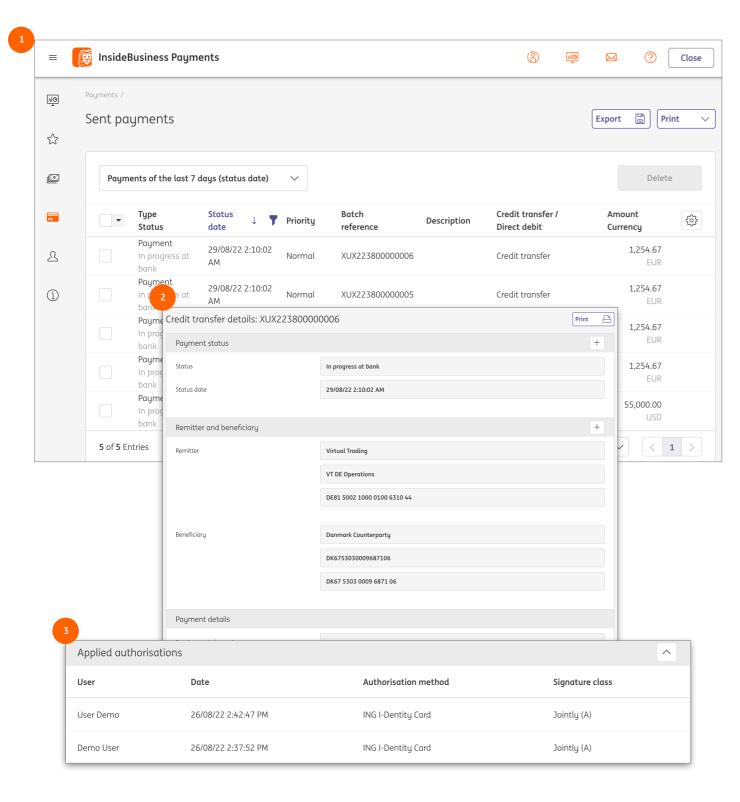

Batch

Ready for authorisation

Ready for authorisation

24/10/23

24/10/23

### Sent payments

After a payment or batch is sent for processing it will move from the Open payments screen to the Sent payments screen.

The Sent payments screen can be reached by navigating to **Payments** -> **Sent payments**.

You can view the details of a payment or batch by clicking it. <sup>2</sup> Here you will find information about who created and authorised <sup>3</sup> the payment or batch.

For an explanation of payment statuses please see the appendix.

Please be aware that deleting a payment on the Sent payment screen does not stop the payment from being processed!

# Import payments

With InsideBusiness payments you can import payments in several supported formats\*

To import a file go to **Payments** -> **Import file**.

Indicate • how the file has to be imported :

#### Batch

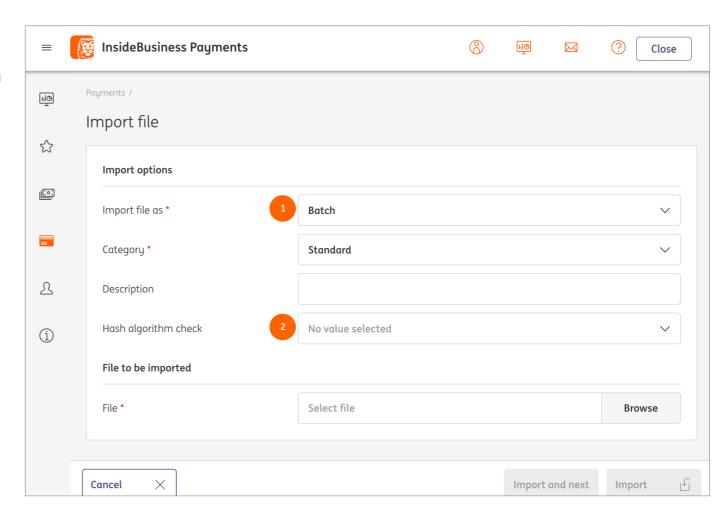

- Results in a batch with payments
- In case **Batch booking** is not indicated in the payment file, and if available for the product, the batch will contain payments with booking type set to tot **Total amount on account statement.**
- In case Batch booking is set to false in the import file, or the product only allows single payments, the batch will contain payments with booking type set to Single payments.

#### Single payments

- Results in a batch with single payments
- Can only be selected in case **Batch booking** is missing or set to false in the import file.

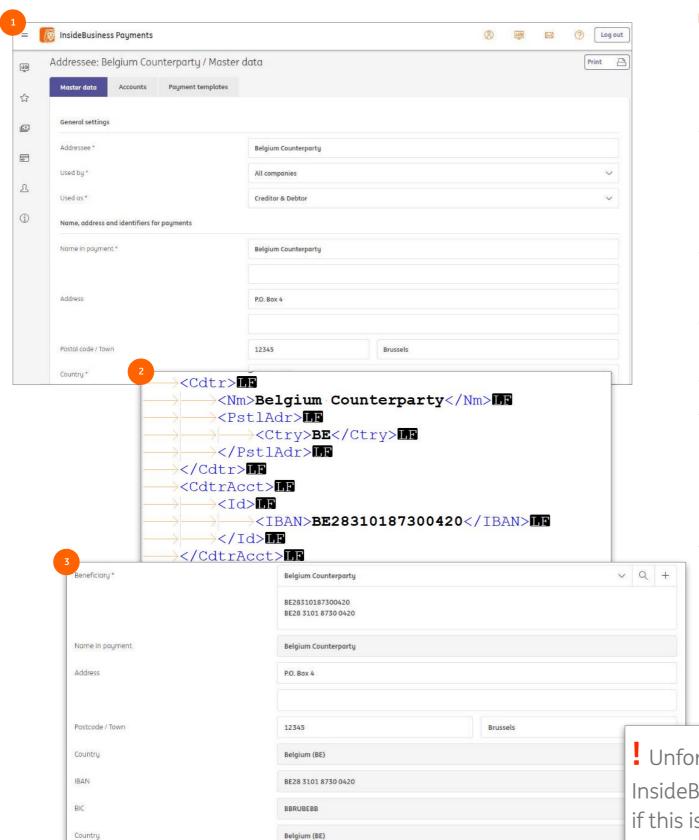

#### Batch (for large files - Payment details cannot be displayed)

- Option to import batches with more than 9.999 payments. The details of the payments are not visible on screen. This option can only be used for SEPA batches with Batch booking true. Be aware that IBP does not check the file. If it contains errors this will only become clear during processing at the day of execution.

If a hash was created when creating the payment file, select the used hash algorithm here. After import the hash calculated by InsideBusiness Payments will be shown and can be compared. If the file was not altered after the export, the hashes should be the same.

### Import enrichment

The address book plays an important role when importing payments. InsideBusiness Payments analyses imported payments and tries to match addressees with addressees registered in the address book. In case of a match the data from the address book is used instead of the data of the import file.

This can be handy in case not all mandatory addressee data is provided in the file, but is available in the address book. The payments will be imported successfully even though they were incomplete.

#### Example

An addressee in the address book ¹ contains full address details. In the import file ² only the name and country of the creditor are provided where full address details are mandatory for an international payment. Nevertheless the payment is imported successfully ³ because the address details are automatically enriched from the address book.

Unfortunately enrichment has a downside. In case of a match InsideBusiness Payments **always** uses the address book data, even if this is less complete than the data from the import file. So always take care to have your address book fully filled and up to date.

### Imported files

After you import a file it is automatically processed in the background. During this process the content of the file is checked. On the Imported files screen the progress can be followed.

Go to Payments -> Imported files.

The status column • shows the progress:

#### Waiting for execution

- File is not yet processed.

#### In progress

- File is being processed.

#### Successful

- The file was imported successfully.

#### Partially successful

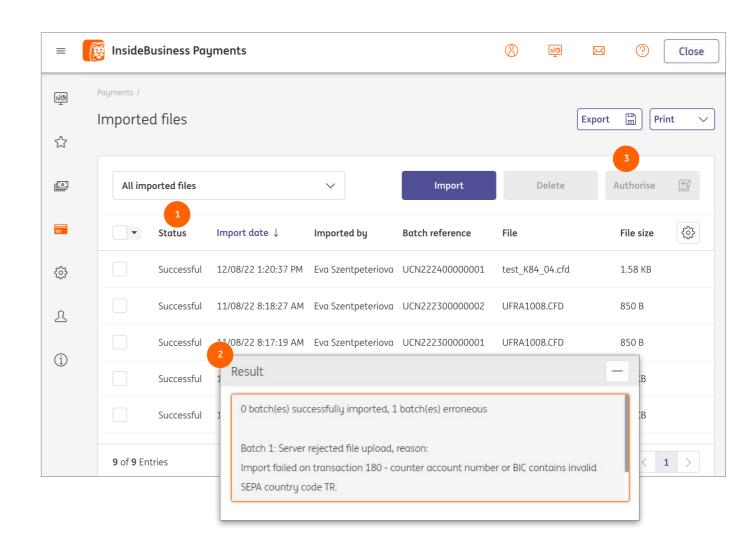

- The file was partially imported.

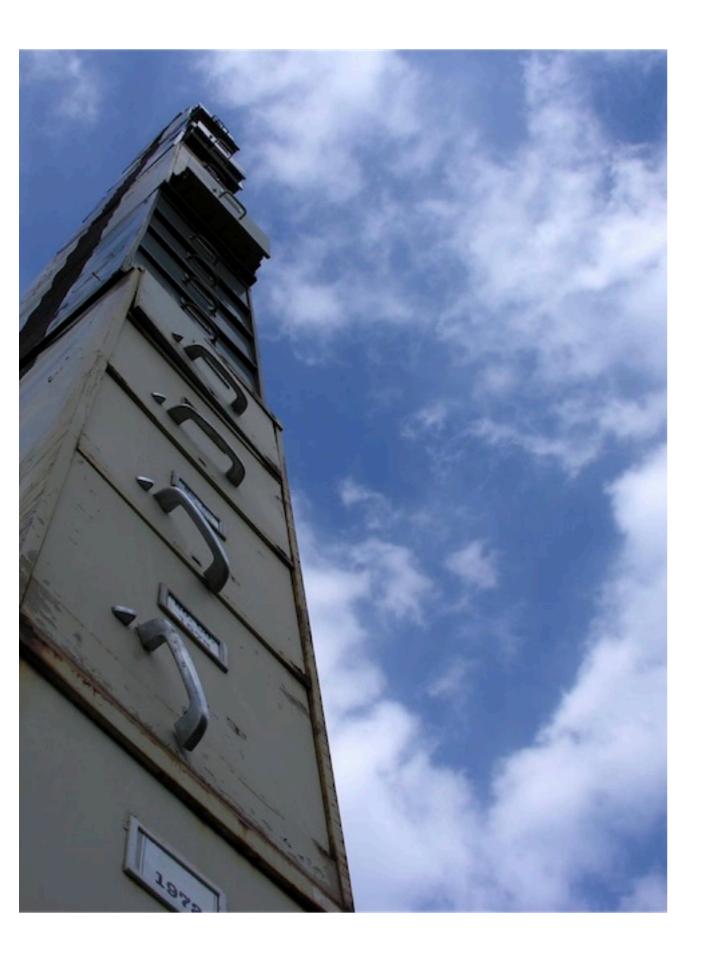

#### **Error**

- Import was not successful.

To view details of the imported file and or details of the errors, click on the imported file in the table.

Payments or batches that are successfully imported will automatically appear on the Open payments screen for further processing. But if you want, given you have the permission to do so, you can also authorise all imported payments right from the imported files screen. Select the successful imported file and click on Authorise. <sup>3</sup>

# Confidential payments

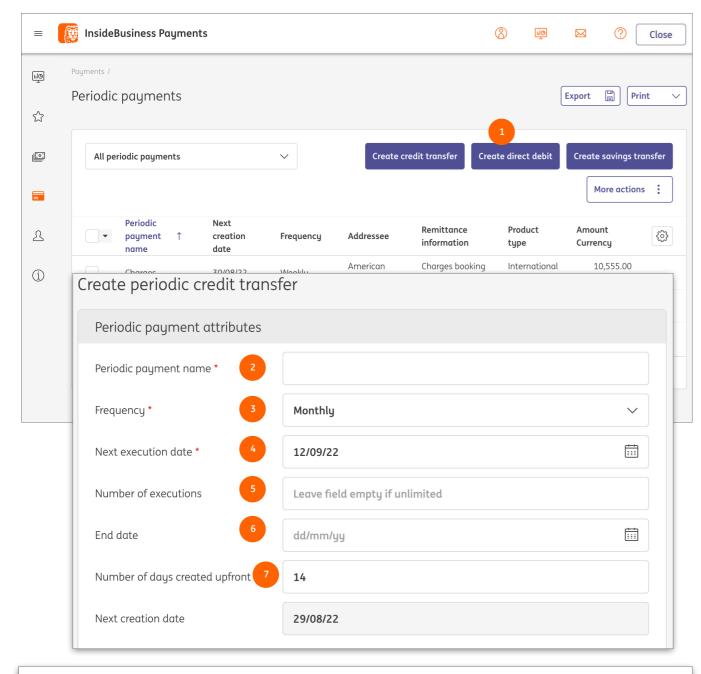

On the Import payments screen you can select a Payment category. It currently contains two options:

Standard: File is imposed without category

**Confidential**: File is imported as confidential.

Payments imported as confidential will only be visible for users that have the profile **View confidential** assigned.

This option is used a lot for importing batches with salary payments.

You do not want to worry about periodically signing the created payments?

Create a Periodic payment for one year and set the **Number of days created upfront** to 370. After saving all payments for the coming year will immediately be created. Select the created payments and authorise them. Set a reminder to repeat this process in one year.

### Periodic payments

InsideBusiness Payments helps you to easily pay recurring invoices by creating a Periodic payment. This periodic payment will create a new payment with the frequency you selected. The payment will appear on the Open payments screen and has to be handled just like a manually created or imported payment. You will find this option by navigating to Payments -> Periodic payments.

As a first step select the type of Periodic payment <sup>1</sup> you want to create (credit transfer, direct debit, savings).

Give the periodic payment a name.

Enter the frequency of for creating the payment and the execution date of the first payment.

Enter the number of payments that have to be created or and End date.

Enter the number of the days • the payment has to be created before the execution date. Select a number that gives you enough time to have the payment authorised.

Fill in all payment details and save the Periodic payment.

# Payment templates

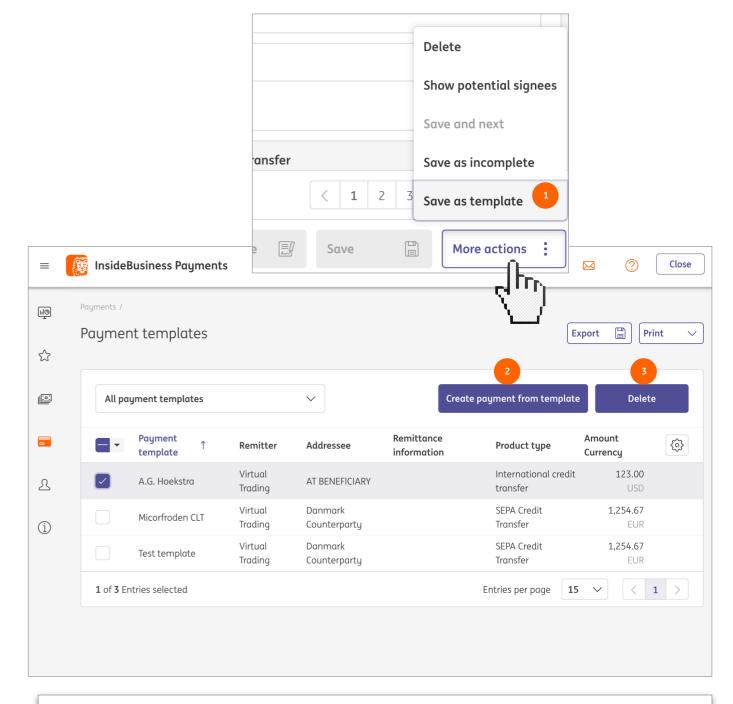

Payment templates can help you to easily recreate payments you have to do regularly.

To create a payment template first create a payment, click **More actions** -> **Save as template.** • You will be requested to enter a name for the template. After that click **Save** and the template is created.

To use a template select it directly on a create payment screen. It's the first field that is presented.

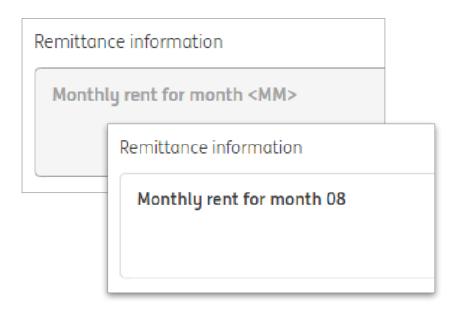

To manage the templates navigate to **Payments** -> **Payment templates.** 

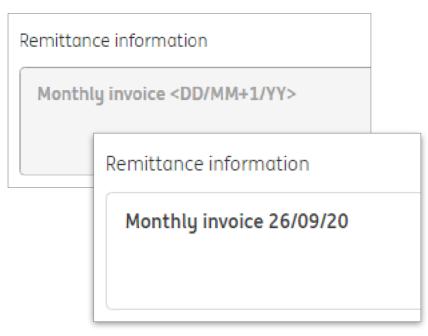

On this screen you see all templates. Select one and click **Create payment from template** • to create a payment or click **Delete** • to remove the template from the list

If you want to edit a template, click on one of the fields of the template and the template detail screen will be shown. Click **More actions** -> **Modify payment template details** and change the template. Leave the screen by clicking **Save.** 

### Replacement Characters

Periodic payments and Payment templates are great tools to optimise your daily workflow. But what about the remittance information? Will it be the same in every created payment?

Not necessarily. By using replacement characters in your remittance information instead of an actual date, the actual content of the remittance info will vary depending on the creation date of the payment.

How does this work?

At the position in the remittance info where you want to show an actual date you enter a code using the following characters:

D for Day

M for Month

Y for Year

/ separator

1-99 number

- + operators to add/distract days/months/years

<> start and end of the code

So if you want the remittance info to show the actual creation date + 14 days you use:

<DD+14/MM/YY>

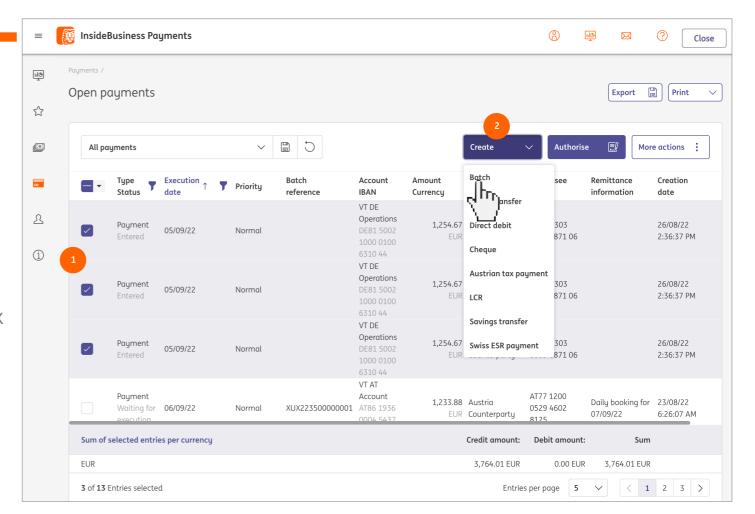

### Managing batches

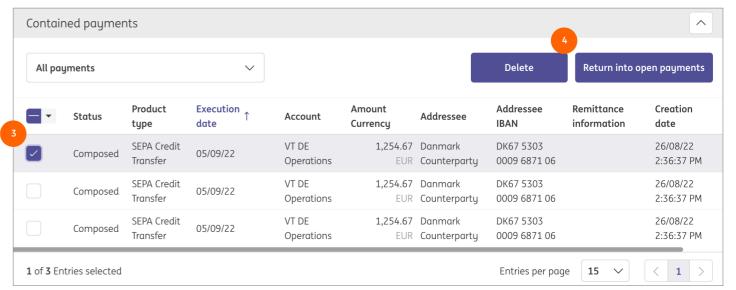

By combining payments in a batch the number of items to manage gets less making your work somewhat easier.

Payments can be imported as a batch. But batches can be assembled afterwards as well. To do this select the open payments you want to combine in a batch and click **Create** -> **Batch.** InsideBusiness Payments uses a set of rules to define which payments can be combined in a batch so the result of this action can be that multiple batches are created.

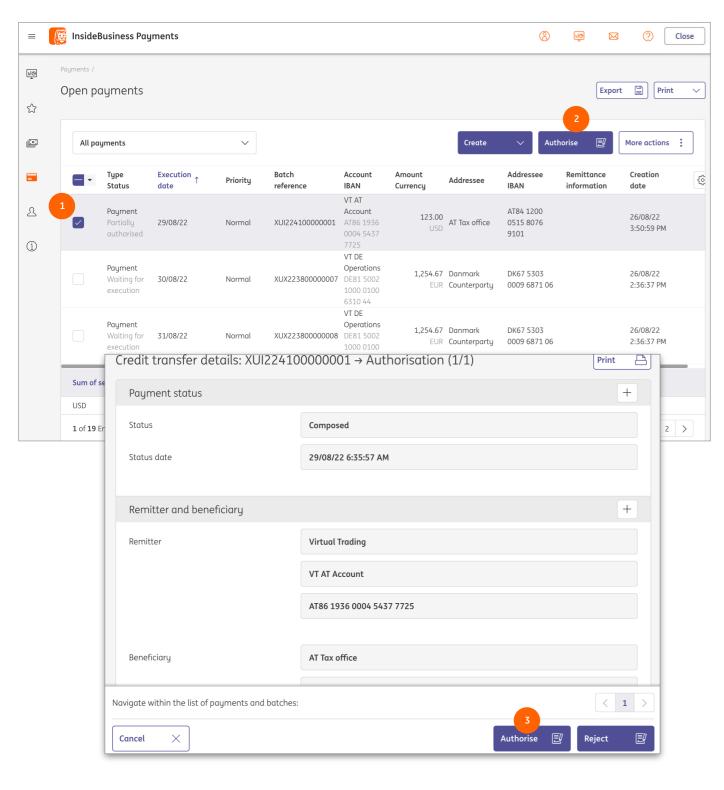

To change the content of a batch simply open the Batch detail by clicking on the Batch on the Open payment screen. In the Contained payments section the content of the batch is shown. Select • the payment(s) you want to remove and click **Delete** to completely delete the payment or click **Return into open payments** • to do just that. To return all payments to open payments click **Unbatch**.

To change the execution dates of the payments in a batch click **More actions** -> **Change execution date** on the batch details screen or on the Open payment screen after having selected the batch.

## Authorise payments

Before payments are executed they have to be authorised first. Depending on the permissions of the authoriser one or two signatures are necessary.

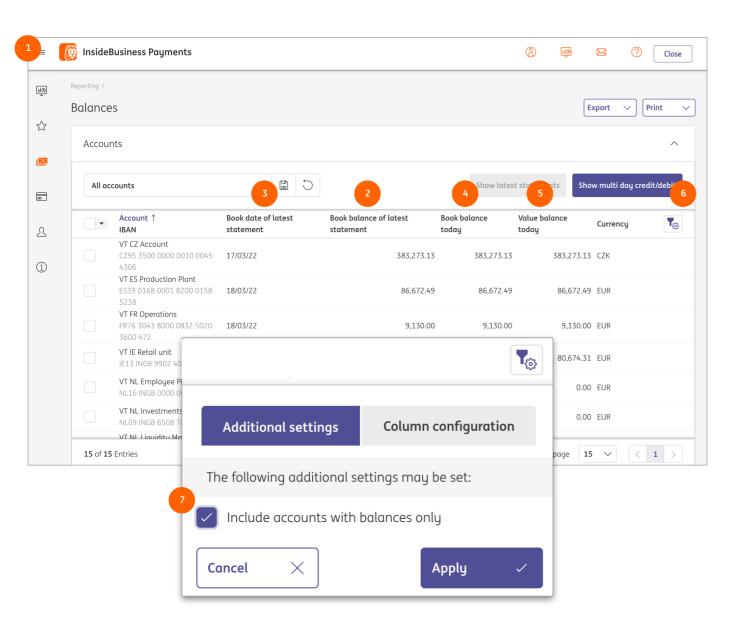

Select the payments and or batches you want to authorise and click **Authorise**.

A summary of the selected payments and batches will be shown. Click **Authorise** <sup>1</sup> and follow the on-screen instructions.

# Reporting

InsideBusiness Payments keeps you up to date with near real time reporting of your accounts held at ING or at third banks.

Clicking the gearwheel ounveils not only the column configuration but also an extra filter option. It can be used to suppress accounts without balances.

### Balances

The balances screen • can be found by navigating to **Reporting** -> **Balances**.

The screen contains the balances of all the accounts for which you have the permission to view balances.

The Book balances of latest statement <sup>2</sup> is the balance on the last end of day statement that was received for the account. The date of this statement is shown in Book date of latest statement. <sup>3</sup>

The **Book balance today** shows the total balance including the intraday transactions received since the last end of day statement. These are updated approximately every 20 minutes.

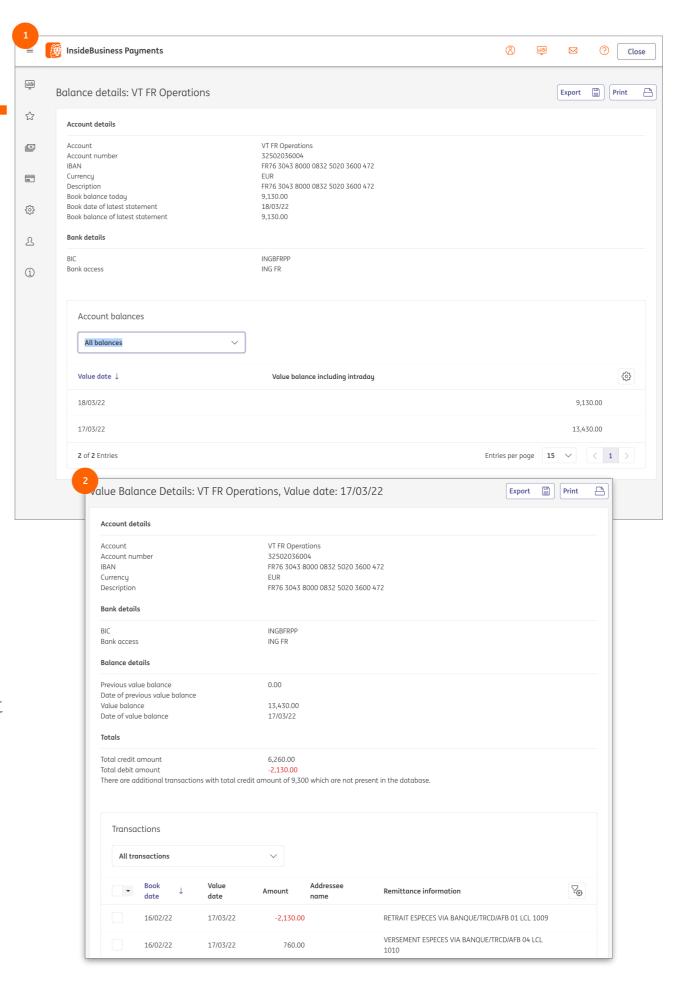

The **Value balance today** shows the value balance including the intraday transactions received since the last end of day statement. The value balance differs from the book balance in case the value date of a transaction differs from the book date.

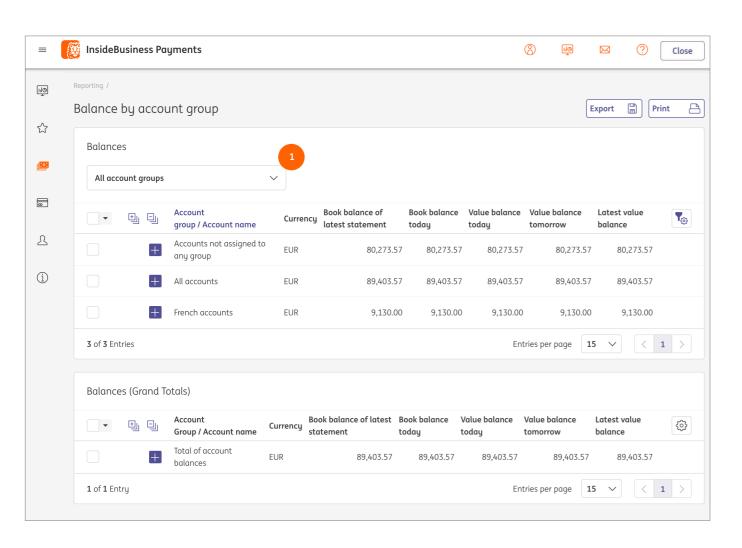

### Value balances

Value balances for third banks are only available in case these are available in the end of day and intraday reports received by InsideBusiness Payments. For ING accounts the value balances are always available.

If you click on one of the accounts on the balances screen (see previous page) the value balance history is shown. 
Here you will see the value balance of the account for past and future dates (if available).

Clicking on the value balance of a certain dates reveals all transactions on that account with that value date

In the view drop down list 1, click **Manage views** and set the view **All** account groups as default.

### Account groups

To view the total balance of a group of accounts InsideBusiness Payments offers the option to create account groups.

To create an account group navigate to **Preferences** -> **Account groups** and click **Create**. Name the group and assign the accounts. It's that simple.

To view the balances of the account group you created go to **Reporting** -> **Balances by account group**. By default only the pre-defined account groups are shown. Change the view <sup>1</sup> to **All account groups** to view them all.

### Credit/debit

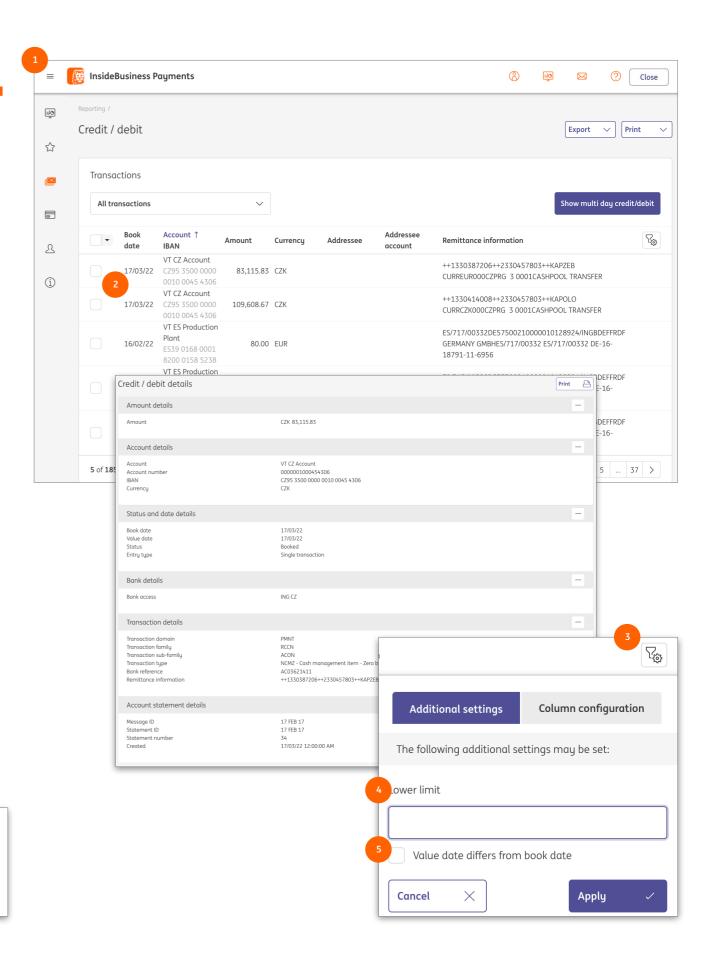

### The Credit / debit screen gives a total overview of all reported transactions.

To get to the Credit/debit screen navigate to **Reporting** -> **Credit/debit**. The screen shows all available, booked transactions for all accounts available to you. ¹¹ Click on a specific transaction to view all details. ²²

The gearwheel icon <sup>3</sup> contains some interesting filter options. You can set a lower limit <sup>6</sup> to hide all transactions with an amount below that limit.

Or you can request • to only show transactions for which the value date differs from the book date. This is extremely helpful in finding just that transaction that causes a difference in book and value balance.

The Credit/debit today screen shows all intraday booked transaction.

#### Account statements

With InsideBusiness Payments you can get an overview of all accounts statements for your accounts held at ING and third banks.

To view all available account statements navigate to **Reporting** -> **Account statements** 1. Click on a statement to view the statement details on screen.

To create a PDF statement either click on **Print** -> **Print statement** on the statement detail screen or on the overview screen after having selected one or more statement.

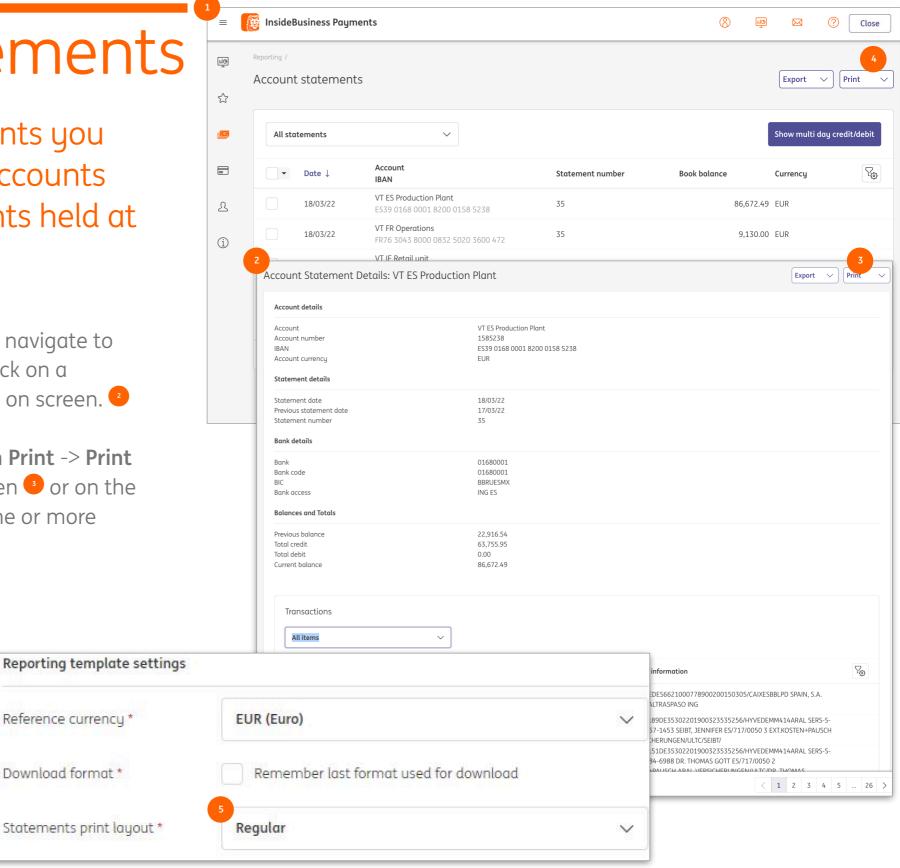

Reference currency \*

Download format \*

Statements print layout \*

Statements come in two different sizes: a regular full size statement or a print friendly condensed statement. Select • the statement of your choice in the general settings.

#### Download statements

Users with the profile **Download reporting** assigned are allowed to download the statements in various formats.

To do this select the statement(s) you want to download and click the **Export** button. Click **Export** again to download a CSV file with the statement data.

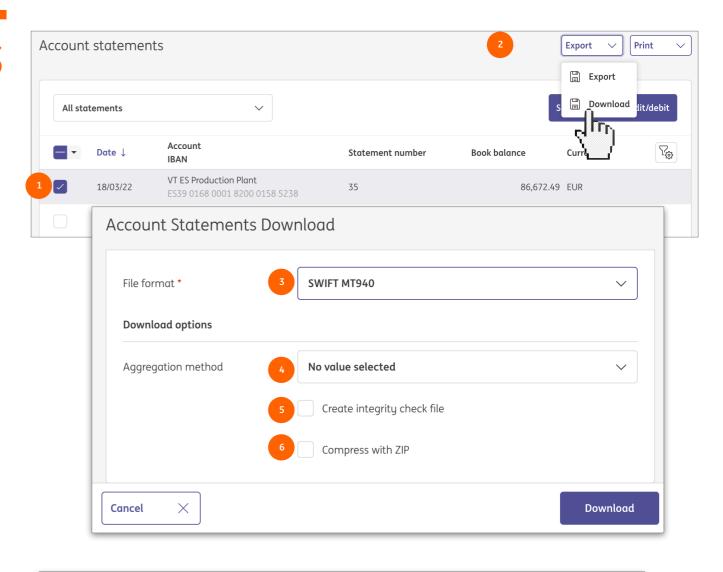

If you want to export to one of the formal reporting formats, click the **Export** button followed by **Download.** •

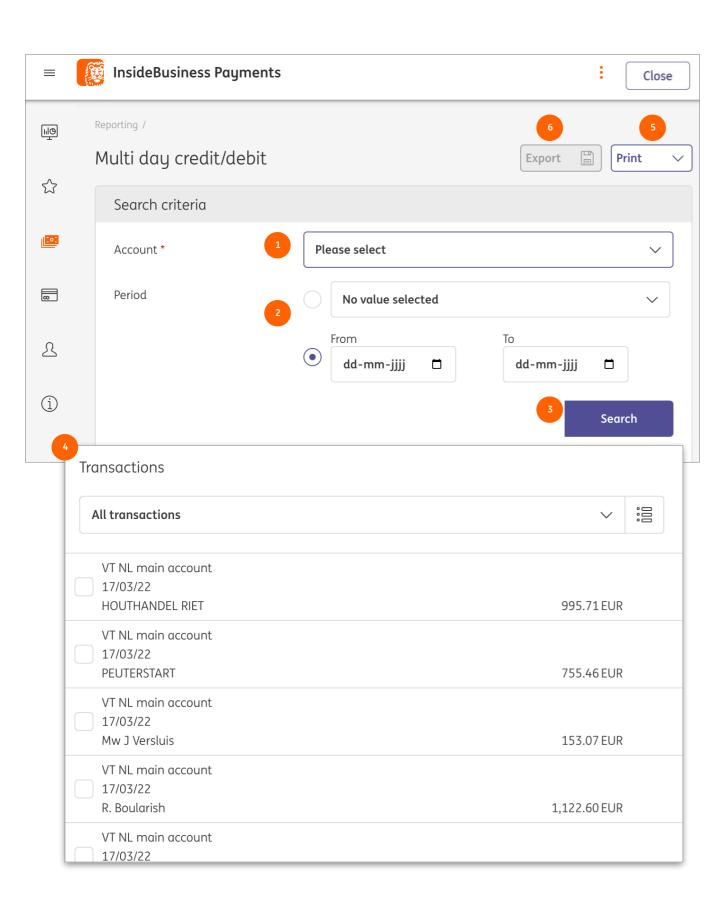

Select the format you want to export the statement to.

If the statement contains a lot of transactions it might be useful to use an aggregation method. You can choose to aggregate transactions below a certain limit, based on the total amount or on the transaction type.

To secure the transfer of the reporting data from InsideBusiness Payments to your ERP system you may want to create an integrity check file. <sup>5</sup>

The export can also be compressed with ZIP to save some space. •

# Multi day credit/debit

To create a PDF account statement covering multiple days, InsideBusiness Payments offers Multi day credit/debit.

This functionality can be reached by navigating to **Reporting** -> **Multi day credit/debit**.

Select the account for which you want to create the statement. Optionally select a period. If you do not select a period all available transactions will be retrieved.

Click the **Search** button <sup>3</sup> and the transaction will be shown. <sup>4</sup>

To create the multi day statement click **Print** ond **Print** multi day credit/debit.

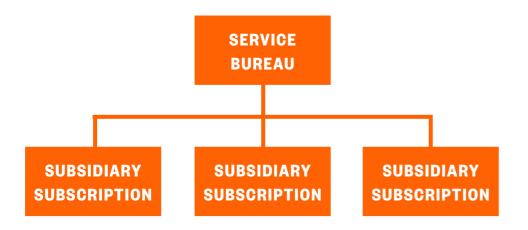

Multi date statements cannot be exported to formal reporting formats, but you can create an export in CSV format by clicking the **Export** button.

# Managing multiple subscriptions

A user can have access to multiple subscriptions in InsideBusiness Payments.

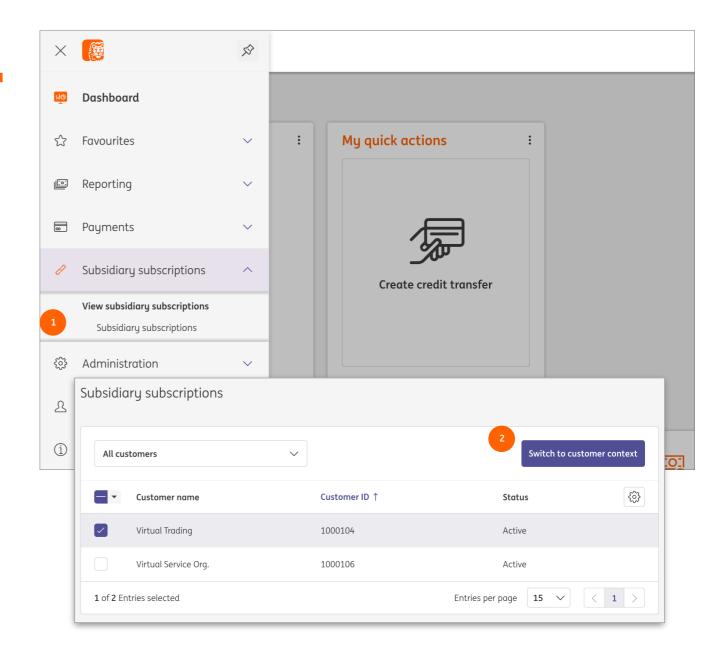

## Multi company construction

A multi company construction is used in case multiple subscriptions have a shared group of users. The subscriptions are linked together, with one subscriptions being the main one. This main subscription is sometimes also referred to as service bureau.

Users in the service bureau can be indicated as being service users. These special type of users can get access to all subscriptions in the multi company construction, provided they have received permissions in those subscriptions.

A service user always logs in into the service bureau. To switch from subscription click the menu option **Subsidiary subscriptions** , select the subscription to switch to and click **Switch to customer context.** <sup>2</sup>

### Multi role player

SUBSCRIPTION

SUBSCRIPTION

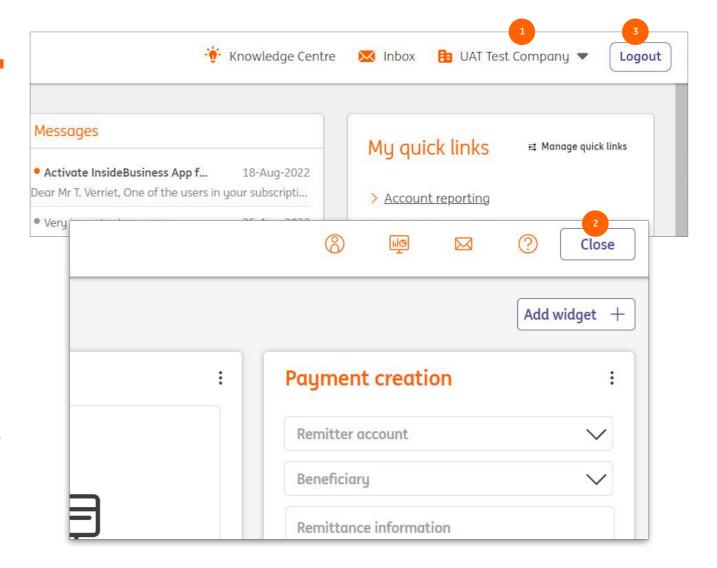

If a user is added to multiple separate subscriptions, we talk about multi role player.

Changing subscription is done from the Dashboard in Portal.

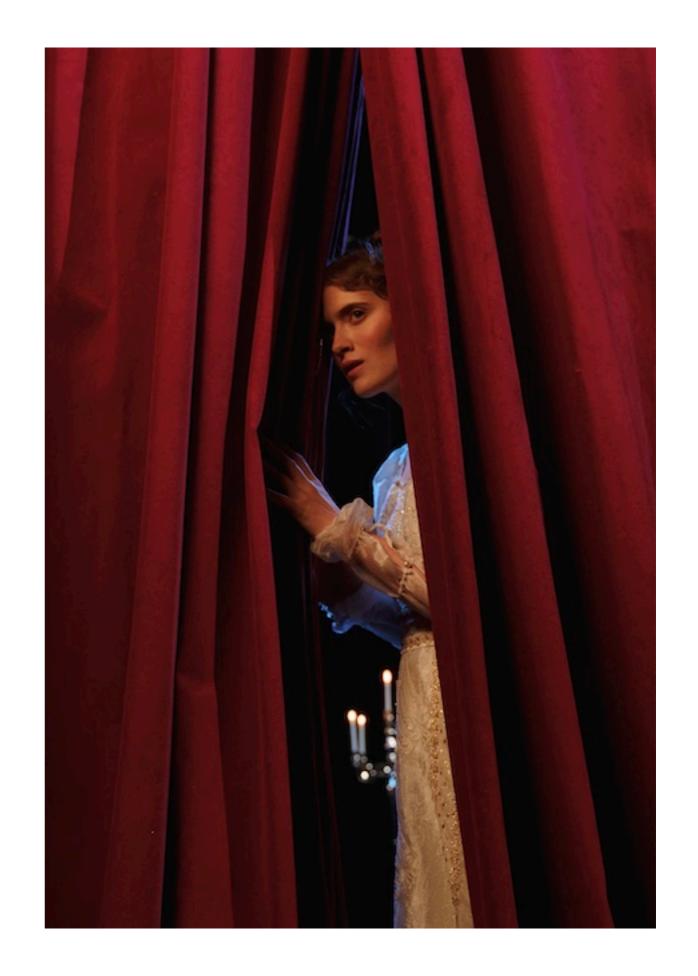

The IBP logout button <sup>2</sup> is replaced by a close button. This button only closes the IBP window and brings you back to the Portal dashboard.

To logout completely click the logout button on the Portal dashboard.

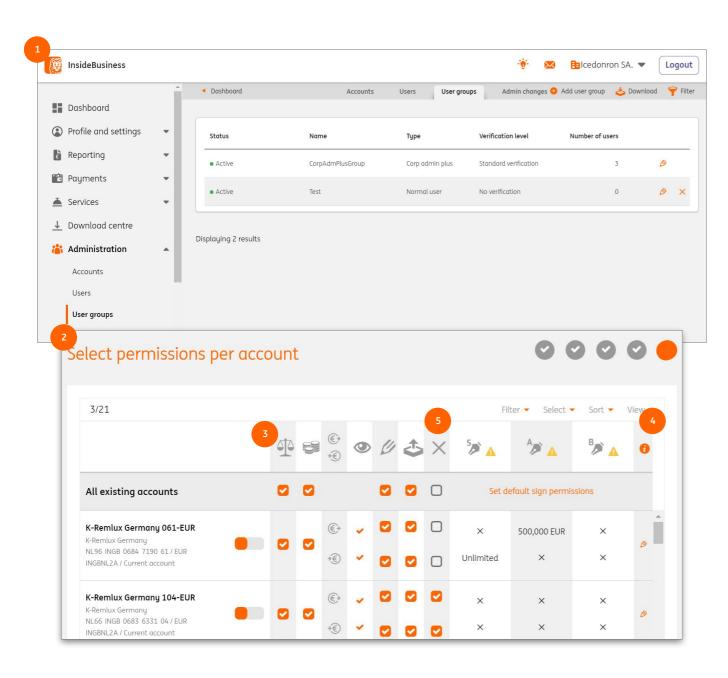

### Administration

The maintenance of a subscription by the Corporate Administrator is almost completely done in InsideBusiness Portal. Exception is the maintenance of the counterparty mandate sign permissions. Because these permissions depend on the address book, they can only be maintained from within InsideBusiness Payments.

#### InsideBusiness Portal

The InsideBusiness Payments subscription setup is being done by a corporate administrator. The corporate administrator defines user groups in InsideBusiness Portal. The groups combine users, companies, accounts, modules and permissions en basically define what a group member is allowed to do in InsideBusiness Payments.

Account and sign permissions are registered at the account screen in the user group. <sup>2</sup> You can find a description of the used symbols <sup>3</sup> by clicking the i <sup>4</sup> symbol.

The account screen is used by multiple modules. The X column to allow users to reject payments is only used for InsideBusiness Transaction Management. To be able to reject payments in InsideBusiness Payments a user needs to have permission to create payments and to to sign the payment that needs to be rejected.

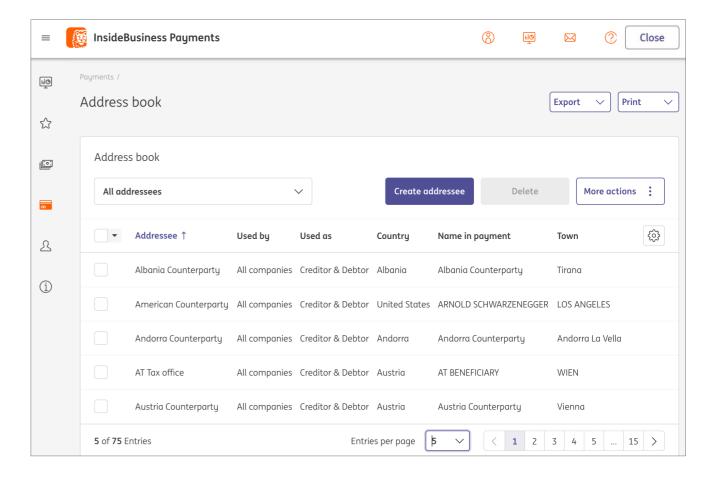

Detailed instructions for corporate administrators can be found in the <u>Corporate Administrator manual</u>.

# Counterparty mandate sign permissions

With counterparty mandate sign permissions a user can be given a deviating sign permissions for payments to certain addressees.

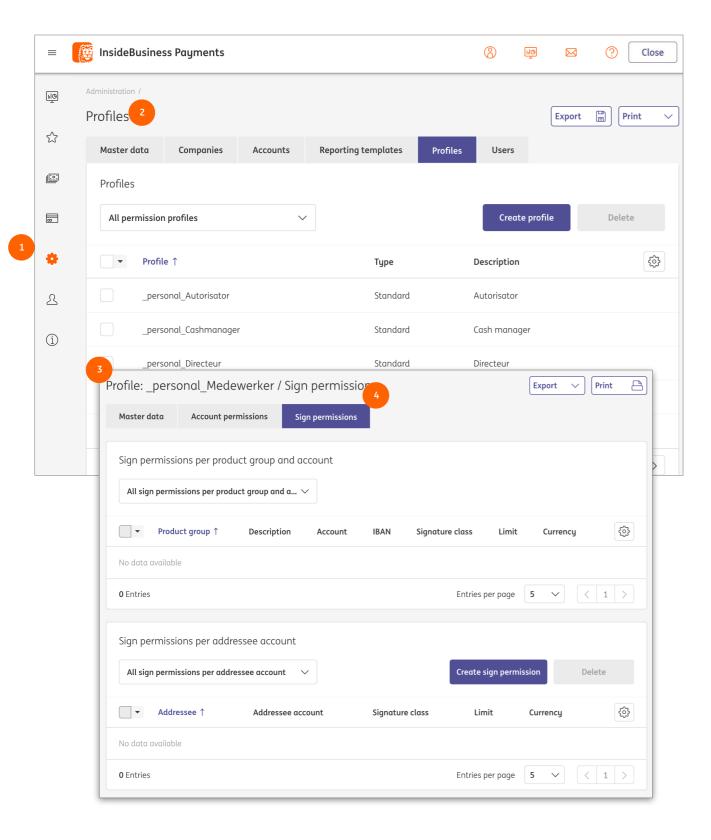

This can be very helpful if for instance a treasurer needs to be able to single sign payments to company accounts while payments to third parties have to be jointly signed.

Prerequisite for using counterparty mandate sign permissions is that the addressee has to be registered in the address book.

To use counterparty mandate sign permissions a technical update has to be done on your subscription. For this please contact your ING contact person.

### Select profile

Via menu option **Administration** • go to **Profiles** • and open the profile • of the user that needs this special sign permission.

Next go to tab Sign permissions.

# Register sign permissions

A counterparty mandate sign permission can be registered for payments to a certain addressee • or for payments to a certain addressee initiated from a certain account. Click **Create sign permission** at the preferred option.

Select addressee <sup>1</sup> and add the sign permission. <sup>4</sup>

Finish the modification by clicking Save, Save, Finish, and Authorise.

### **Appendix**

This appendix contains instructions for specific payment types, links to the InsideBusiness Payments instruction videos, a description of the Address book import file and an overview of payment statuses.

### Import formats

Importing payments can be done using one of the following formats. The file size must not exceed 250Mb or 9.999 payments.

Import format	Version	Description
OneXML rulebook 2023	1.4	Preferred generic import format for credit transfers and direct debits
OneXML rulebook 2021	3.7	Generic import format for credit transfers and direct debits
AFB160	2.02	French import format for LCR
AFB320	2.02	French import format for international credit transfers
UK Domestic	1.3	English import format for credit transfers and direct debits
Swift MT101	1.1	Generic import format for credit transfers
Swift MT100	3.9	Generic import format for credit transfers and direct debits
CFD	1.5	Czech import format for credit transfers and direct debits
PLI	3.4	Polish import format for credit transfers and direct debits
OneCSV	1.0	Generic import format for regular credit transfers
DTAZV	1.0	German import format for credit transfers
BTL91	1.0	Old Dutch import format for international credit transfers
RIBA	6.02	Italian import format for direct debits
GIRO	1.0	Hungarian import format for single credit transfers and direct debits
MUPS	1.1	Hungarian import format for multiple credit transfers and direct debits
SEPA CT	Pain.001.001.09	SEPA import format for credit transfers rulebook 2023
SEPA CT	Pain.001.001.03	SEPA import format for credit transfers rulebook 2021
SEPA DD	Pain.0080001.08	SEPA import format for direct debits rulebook 2023
SEPA DD	Pain.008.001.02	SEPA import format for direct debits rulebook 2021

#### Romanian budgetary payment (fiscal and customs office)

Domestic Romanian payments to accounts with TREZ or NBOR at position 5-8 of the IBAN are indicated as budgetary payments. In that case extra fields will be displayed.

Indicate payment type: fiscal, customs, fiscal duties, taxes, fines, VAT, etc.

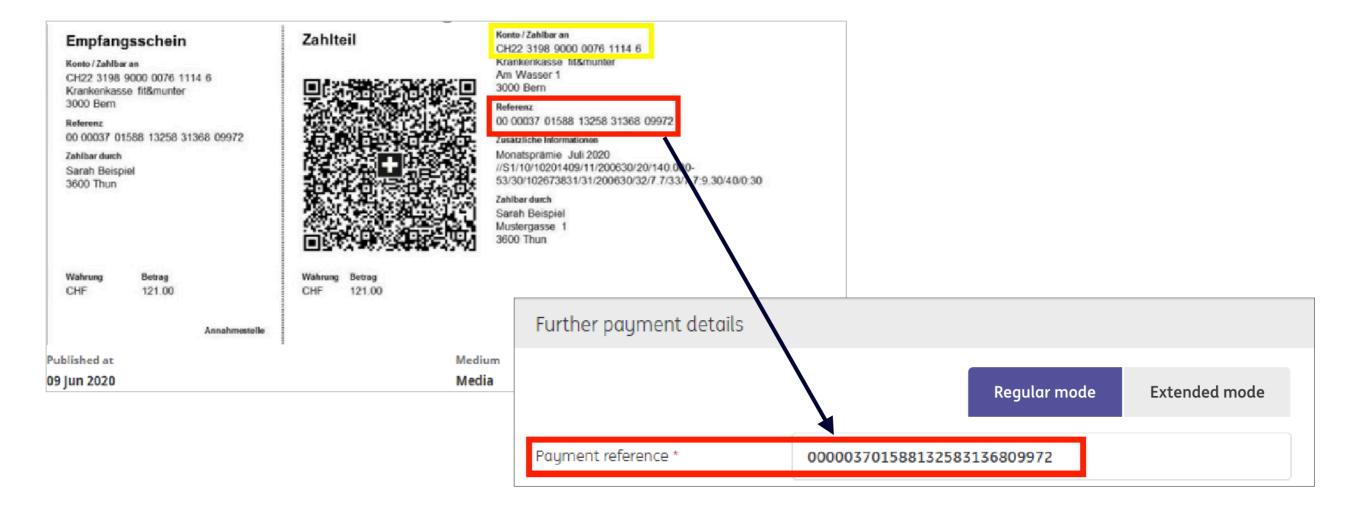

Choose from the scrolling list the fiscal type: CIF/CNP/NIF.

Enter the CIF/CNP/NIF number.

The entered value will be checked on format.

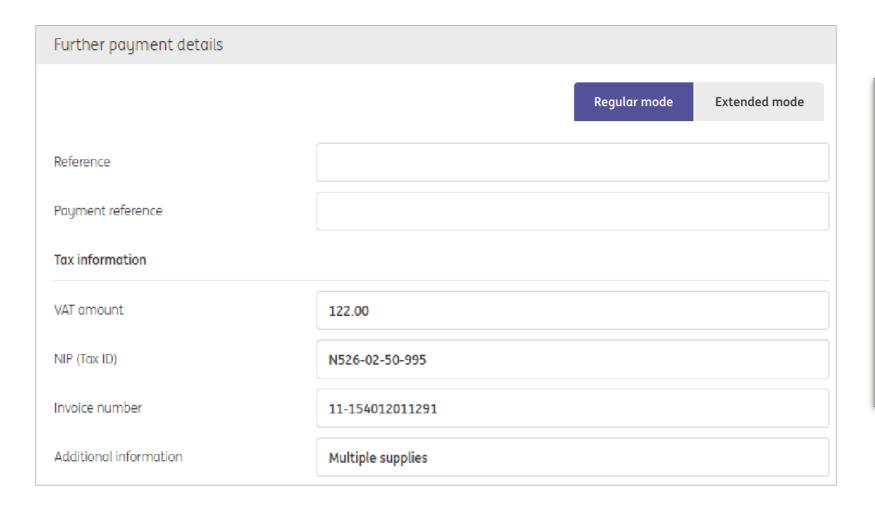

#### Swiss QR Bill

The Swiss QR Bill is a follow up of the Orange slip. It contains a QR code that contains all data needed to enter the payment, on supported devices. QR payments are recognised by the beneficiary IBAN (position 5-9 in the range 30000-31999) in combination with currency CHF. In that case the payment reference becomes a mandatory field.

#### Polish Split payment

For domestic Polish payments you can use the split payment mechanism. For split payments the bank will transfer the VAT part of the payment to the blocked TAX account of the beneficiary. In some cases it's mandatory ti use the split payment mechanism. To create a split payment you need the NIP (tax ID) of the beneficiary).

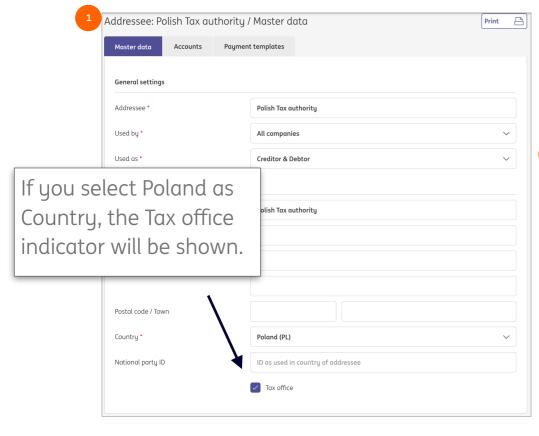

The Tax information section is always visible for payments in Zloty between two Polish Zloty accounts.

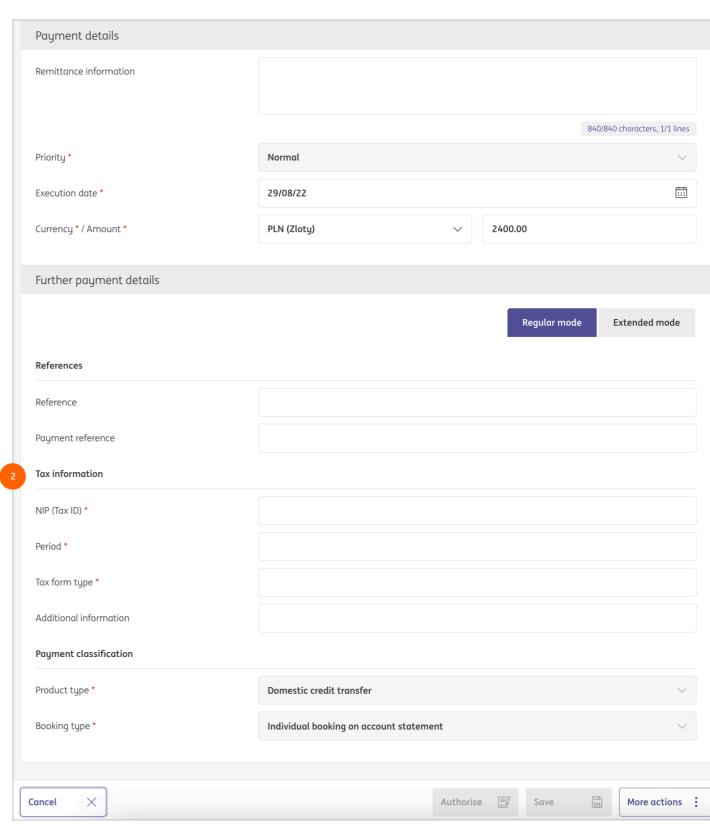

VAT amount is the part of the total sum that's VAT.

Enter the NIP ID of the beneficiary.

#### Polish Tax payment

To create Polish Tax payments, first add the Polish Tax authority to your address book in IBP <sup>1</sup>. Then create a credit transfer to the Tax authority and the specific tax fields <sup>2</sup> will automatically be shown.

#### Polish Tax payment

Period shows the period to which the tax payment refers. It has 3 components: The first part of the field "Period" contains two characters of the "Year" (in two-digits), e.g. 20 The second part contains one of the following "Period Type":

M - means month,

P – means half-year,

R - means year,

K – means quarter of year,

D - means decade,

J – means day.

The third part contains "the Period number". In case "Period Type" has value:

R - the period number field have no period number value,

P - the period number field should have one of values 01 or 02,

K - the period number field should have one of values 01, 02, 03 or 04,

M - the period number field should have value from range 01-12,

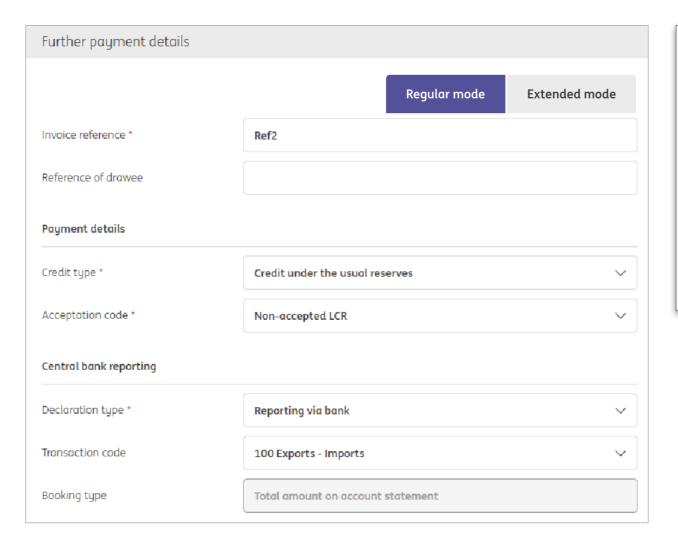

D - the period number field should have two digits with value between 01, 02 or 03, next digits have two digits within range of 01-12,

J - the period number field should have value from range 01 – 31 as value of day, next signs from range of 01 – 12 as month value.

#### French LCR payment

An LCR (Lettre de Change Relevé) is a French domestic bill of exchange. You can compare it with a future dated check. An LCR is therefore used a lot to finance trade. The remitter is the party receiving the money. The drawee will accept the LCR once the goods have been received. To create an LCR you need a French ING account plus the SIREN ID's of both you and the drawee.

Invoice reference is your reference.

Reference of drawee is the reference of the drawee.

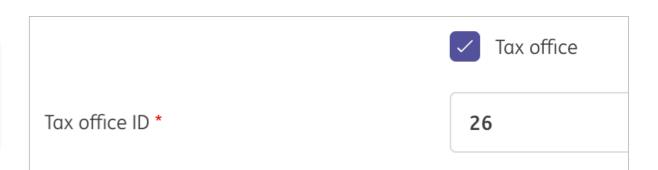

Select the Credit type and Acceptation code.

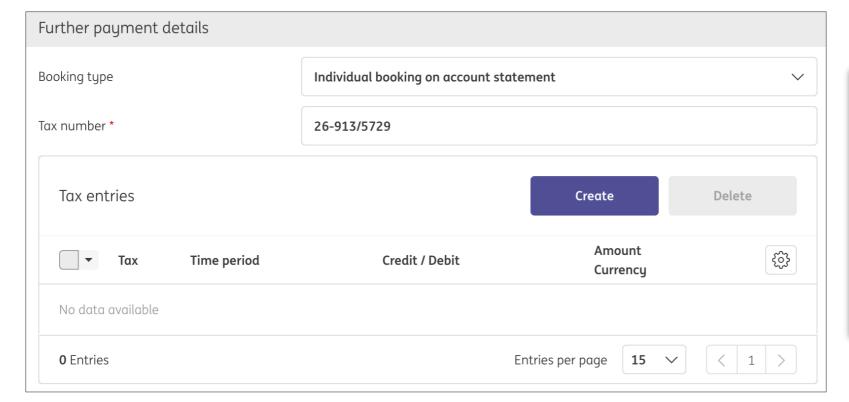

In case Central bank reporting is mandatory, select the Transaction code of the goods in section Central bank reporting.

#### Austrian TAX payment

To pay tax in Austria the remittance information has to be structured according to a prescribed format. To guide you in creating this format IBP offers a specific screen for Austrian tax payments.

First step is to add the Austrian Tax authority to your IBP address book. Check the Tax office check box and enter the Tax office ID.

Enter your Tax number if it's not added automatically.

Create Tax entries for every tax type involved with this payment. The total sum of the Tax entries has to be the same as the total amount of the payment.
